

# Project Fitme

Guam Early Hearing Detection and Intervention (Guam EHDI)

Did you know that hearing loss is the number one birth defect?

According to the Centers for Disease Control and Prevention (CDC), hearing loss in newborns ranks number one.

Why is it important to identify hearing loss in children so early?

The earlier children with hearing loss are identified, the earlier early intervention services can be provided which in turn supports better outcomes for the children in terms of their language and cognitive development.

One of the benchmarks that our system aims for is the 1-3-6 requirement: identification of hearing loss by one month; completion of a Diagnostic Audiological Evaluation (DAE) by three months; and implementation of early intervention services by six months.

## What is Guam EHDI-Fitme?

This project aims to work towards the Overall Program Goal to support the development of a statewide program and system of care that ensures that deaf or hard of hearing children are identified through newborn and infant hearing screening and receive evaluation, diagnosis, and appropriate intervention that optimize their language, literacy, and social-emotional development. Program goals are:

1. Increase health professionals' engagement within and knowledge of the EHDI system.
2. Improve access to early intervention services and language acquisition.
3. Improve family engagement, partnership, and leadership within the EHDI programs and systems.

## What happens if a newborn does not pass their hearing screening?

Babies who do not pass their initial hearing screening are referred to have a re-screening by the Guam Early Intervention System.

If they do not pass this second screening, they are referred to an audiologist for a formal Diagnostic Audiological Evaluation (DAE).

In addition, a comprehensive tracking and surveillance system known as Guam ChildLink has been established to ensure that all infants receive appropriate follow up services.

## What can health care providers do to help in identifying children with hearing loss?

You can help by asking parents/caregivers if they have any concerns about their child's hearing, speech and or language development, and if the infant has high risk factors for hearing loss at each well baby check-up.

## How can I learn more about Guam EHDI Project Fitme?

Please visit our website: [www.guamehdi.org](http://www.guamehdi.org)

## Did you know that the Guam EHDI Project has facilitated universal newborn hearing screening on Guam since 2003?

Public Law 27-150, "The Universal Newborn Hearing Screening and Intervention Act" was passed in December 2004.

1. Guam EHDI ensures that all babies born on Guam receive a hearing screening before they leave their birthing facility. Universal hearing screening is part of the standard of care at Guam Memorial Hospital Authority (GMHA), Sagua Mañagu Birthing Center (SMBC), Guam Regional Medical City (GRMC), and the U.S. Naval Hospital.

This brochure is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under Grant No. H61MC24883 Newborn Hearing Screening and Intervention (\$250,000). This information or content and conclusions are those of the author and should not be construed as the official position or policy of, nor should any endorsements be inferred by HRSA, HHS or the U.S. Government. Facilitated by the University of Guam Center for Excellence in Developmental Disabilities Education, Research, & Service (Guam CEDDERS).
